MESSAGE CHAIR: FUNCTIONS

MASSAGE

Massage helps the body do away with built up waste products, like lactic acids, that contribute to muscle soreness and bad health. The massage provided by the Feel Good Vending Chair offers a fully automated massage that will be appreciated by everyone.

ROLLING

Due to prolonged periods of standing or poor posture, both muscles and joints in the body can become stiff and tense. This rolling acupressure movement will loosen and relax the effected areas.

KNEADING

Kneading action is applied at the shoulders, along and around the full length of the spine and can work better than the fingers of a masseur. The kneading action helps improve blood circulation and eases tension.

TAPPING

Light rhythmical tapping along and around the spine triggers the release of endorphins, (neuron chemicals that relieve pain.) as a result, pain is blocked and the flow of blood and oxygen is increased. The tapping motion allows muscles to relax and promotes healing.

DUAL ACTION

Both kneading and light rhythmical tapping together.

ACUPRESSURE

Lack of exercise can cause muscles to become rigid, and accelerate the aging process. The stimulating acupressure massage provided by the Feel Good Massage Chair will help alleviate pain in stiff and ageing joints and improve energy levels

BACK & SPINE

Damage can occur to the spine due to prolonged periods of standing, sitting, bending, or poor posture.

CORRECTION

The Feel Good Massage Chair will help relieve pain and help repair damage to the effected areas.

TECHNICAL SPECIFICATIONS

	SPECIFICATIONS
Functions	Stroke, tapping, kneading, rolling, dual action, fully automatic acupressure massage
Stroke	538mm
Power	1AC 220-240V
Consumption	150W (General Type) 100W (Magnetic Wave)
